It is recommended that if you are unfamiliar with this type of work that you seek out and hire a competent service center. It is also recommended that if you choose to do this work yourself that a factory service manual be obtained for the proper procedures pertaining to removal, replacement, proper torque specifications and identifying TTY hardware for your vehicle. These instructions are provided as a guideline for the safe installation of Energy Suspension's polyurethane bushings, once you have removed the factory components from your vehicle. Wheel alignment is almost always disturbed when suspension components are removed or replaced. It is recommended that you have the alignment checked on your vehicle at a competent alignment shop. Energy Suspension recommends that you read over all the installation instructions and check all Part Numbers's and quantities in the Parts List before you start. Call customer service at 949-361-3935 if the parts in your Set do not match the Parts List. Prior to installation, make sure that your vehicle is in good mechanical condition and that there are no suspension or steering related problems. These parts have been designed to work only with a vehicle that is in a good state of repair.

Front Rack & Pinion

Torque all nuts and bolts before driving. Torque passenger side top mount bolt to 100 ft-lb. Torque the 3 rack mounting bolts and nuts to 140 ft-lb. Reuse factory 2-hole plate under nuts on driver side. Visually inspect and re torque all fasteners after 200, 500 & 1000 miles. Recheck fasteners during routine vehicle service. **IMPORTANT:** Have the alignment checked on your vehicle at a qualified alignment shop.
