

INSTALLATION GUIDE

NISSAN R35 GT-R

REAR APPLICATION

Kit 76535

For maximum effectiveness and safety, please read these instructions completely before proceeding with installation.

Failure to read these instructions can result in an incorrect installation which could result in damage to the vehicle, minor to severe personal injury or death.

Introduction

Air Lift Performance thanks you for purchasing the most complete, fully engineered high-performance air suspension made for the Nissan R35 GT-R. Read these installation instructions to correctly and safely set up the vehicle for a #lifeonair.

Air Lift assumes that the installer has the mechanical knowledge and ability to work on vehicle suspension systems and has basic tools necessary to complete a suspension replacement project. Special tools needed to complete the installation are noted on the System Overview page.

Air Lift reserves the right to make changes and improvements to its products and publications at any time. For the latest version of this manual, contact Air Lift Performance at **(800) 248-0892** or visit **www.airliftperformance.com**.

An Air Lift Performance air management system is highly recommended for this product. Learn more at **air-lift.co/productlines**.

NOTATION EXPLANATION

Hazard notations appear in various locations in this publication. Information highlighted by one of these notations must be observed to help minimize risk of personal injury or possible improper installation, which may render the vehicle unsafe. Notes are used to help emphasize areas of procedural importance and provide helpful suggestions. The following definitions explain the use of these notations as they appear throughout this guide.

DANGER

INDICATES IMMEDIATE HAZARDS WHICH WILL RESULT IN SEVERE PERSONAL INJURY OR DEATH.

WARNING

INDICATES HAZARDS OR UNSAFE PRACTICES WHICH COULD RESULT IN SEVERE PERSONAL INJURY OR DEATH.

CAUTION

INDICATES HAZARDS OR UNSAFE PRACTICES WHICH COULD RESULT IN DAMAGE TO THE VEHICLE OR MINOR PERSONAL INJURY.

NOTE

Used to help emphasize areas of procedural importance and provide helpful suggestions.

TECH TIP

Used to provide helpful tips to ease the installation process.

System Overview

Fig. 1

HARDWARE CONTENT

Item	Part #	Description	Qty
A	35776	SHOCK ASSEMBLY, R35 GT-R, REAR	2
B	20997	LEADER LINE, 1/4" ID	2
C	21810	1/4" FNPT X 1/4" PTC FITTING, DOT	2
D	21987	1/4" FNPT X 3/8" PTC FITTING, DOT	2

Missing or damaged parts? Call Air Lift customer service at (800) 248-0892 for a replacement part.

Install the System

NOTES

See important safety notices on page 2.

SECTION 1. PREPARE THE VEHICLE

1. Unclip the rear seat bases and remove the bases from the vehicle (Fig. 2).

Fig. 2

2. At the base of each rear seat back, remove the bolt shown in Figure 3, then push upward on the seat back. Remove both seat backs this way (Figs. 4 and 5).

Fig. 3

Fig. 4

Fig. 5

3. Unclip and remove the center cup holder between the rear seat locations.
4. Unbolt the two bolts at the base of the rear center speaker cover (Fig. 6). With the two lower bolts removed, carefully unclip the speaker cover from the rear support and remove from the vehicle (Fig. 7).

*Fig. 6**Fig. 7*

5. Remove both side sills (Figs. 8 & 9).

*Fig. 8**Fig. 9*

6. Remove the weather-stripping from the rear most portion of the door opening (Fig. 10).

*Fig. 10*

7. Unclip the rear side panel from the rear support and side (Figs. 11 & 12). Remove it from the vehicle (Fig. 13).

Fig. 11

Fig. 12

Fig. 13

8. Remove the upper side trim by unthreading the screw beneath the hanger, unbolting the seat belt from the pillar and unclipping the remaining plastic retention clips (Figs. 14a-14i).

Figs. 14a-c

Figs. 14d-f

Figs. 14g-i

9. Remove all the plastic screws holding the rear parcel shelf (Figs. 15-17) and pull the shelf straight forward, then down (Fig. 18).

Fig. 15

Fig. 16

Fig. 17

Fig. 18

10. Disconnect the Electronic Damping Control on each rear shock (Figs. 19 & 20). This may be located beneath a foil shield with an adhesive backing (Fig. 21); remove it if necessary.

Fig. 19

Fig. 20

Fig. 21

SECTION 2. STOCK SUSPENSION REMOVAL

1. Elevate and support the vehicle with a hoist or safety stands (Fig. 22). Remove the rear wheel and support the hub assembly (Fig. 23).

Fig. 22

Fig. 23

2. Remove the three upper shock mount nuts (Fig. 24).

Fig. 24

3. Remove the lower shock bolt and extract the stock rear shock assembly (Fig. 25) from the vehicle.

Fig. 25

SECTION 3. INSTALL THE KIT COMPONENTS

PLEASE READ - IMPORTANT INSTALLATION INFORMATION

FOR COIL TO AIR UPGRADE KIT INSTALLATIONS ONLY: Please refer to the included Coil to Air Upgrade Kit installation guide (MN-2000) for details on how to disassemble the coilovers and assemble the air springs.

Also refer to your control system installation guide to ensure the installation of your air suspension system is complete.

NOTES

All dampers come pre-set to even lengths, and locking collars are pre-tightened. It is always recommended to double-check that the dampers are the same length side to side, and the locking collars are tight.

Please refer to the User Guide included with the kit for any suspension setup adjustments.

1. Begin by installing the leader line (B) into the air spring. Tighten the appropriate fitting (C or D) to the leader line (1 3/4 turns beyond hand-tight). Tighten the leader line into the air spring 1 3/4 turns beyond hand-tight (Fig. 26).

Fig. 26

2. Remove the paper gasket from the factory shock upper mount and place onto the new shock assembly (Fig. 27).

Fig. 27

3. Attach the shock assembly to the shock tower with the three upper mount nuts. Torque to 27Nm (20 lb.-ft.).
4. Lift the hub assembly and install the lower shock mount bolt. Do not torque at this time.

SECTION 4. ROUTE THE AIR LINES

WARNING

AFTER INSTALLATION, ENSURE ALL ORIGINAL EQUIPMENT VEHICLE SAFETY FEATURES ARE PROPERLY CALIBRATED BY A QUALIFIED TECHNICIAN. CHANGING VEHICLE HEIGHT MAY AFFECT FUNCTIONING OF SAFETY SENSORS AND CAMERAS.

1. Fully compress the suspension using a jack. With the suspension compressed, review the best routing for the air line that is clear of all suspension components and axle.
2. Routing should allow for the suspension to extend and steer without kinking, pulling the line tight or rubbing on other components. Following the brake line routing is often a good place to start. Check clearances to all other components.

PLEASE READ - IMPORTANT INSTALLATION INFORMATION

Please refer to your control system installation guide for more details on air line routing and to ensure the installation of your air suspension system is complete.

Before Operating

SET THE RIDE HEIGHT

1. Refer to the User Guide supplied with this kit to set up the suspension.

Torque Specifications		
Location	Nm	lb.-ft.
Lower shock mount bolt/nut	75	55
Upper mount nut	27	20
Air Fitting (with sealant)	1.5-3.0 turns beyond hand tight	
Lower damper locking collar	half turn beyond hand tight	
Wheel studs	131	97

2. Upon successful completion of the installation, follow these pressure requirements for the air springs.

CAUTION

FAILURE TO MAINTAIN ADEQUATE MINIMUM PRESSURE (OR PRESSURE PROPORTIONAL TO LOAD) MAY RESULT IN EXCESSIVE BOTTOMING OUT AND **WILL VOID THE WARRANTY.**

CHECK FOR BINDING

CAUTION

MAKE SURE THE FRONT WHEELS ARE STRAIGHT WHEN DEFLATING AND REINFLATING AIR SPRINGS.

1. Inflate and deflate the system (do not exceed 8.6BAR [125 PSI]) to check for clearance or binding issues. With the air springs deflated, check clearances on everything so as not to pinch brake lines, vent tubes, etc. Clear lines if necessary.
2. Inflate the air springs to 5.2-6.2BAR (75-90 PSI) and check all connections for leaks.

INSTALLATION CHECKLIST

- ☐ **Clearance** – Inflate the air springs to 5.2-6.2BAR (75-90 PSI) and make sure there is at least 13mm (1/2") clearance from anything that might rub against the air spring. This should be checked with the air spring fully inflated and fully deflated.
- ☐ **Leak** – Inflate the air springs to 5.2-6.2BAR (75-90 PSI) and check all connections for leaks. All leaks must be eliminated before the vehicle is road-tested.
- ☐ **Heat** – Be sure there is sufficient clearance from heat sources, at least 152mm (6") from air springs and air lines. If a heat shield was included in the kit, install it. If there is no heat shield, but one is required, call Air Lift customer service at **(800) 248-0892**.
- ☐ **Fastener** – Recheck all bolts for proper torque.
- ☐ **Road** – Inflate the air springs to recommended driving pressures (see previous page). Drive the vehicle 16km (10 miles) and recheck for clearance, loose fasteners, and air leaks.
- ☐ **Operating instructions** – If professionally installed, the installer should review the operating instructions with the owner. Be sure to provide the owner with all paperwork that came with the kit.

DAMPING ADJUSTMENT

1. The dampers in this kit have 32 settings, or "clicks," of adjustable compression and rebound damping characteristics. Damping is changed through the damper rod using the supplied adjuster (example shown here) or a 3mm hex key (not included).

2. Turn the adjuster clockwise (H), and the damping settings are hardened, reducing oscillations and body motion. Turn the adjuster counterclockwise (S), and the damping is softened.
3. Each damper will need to be set after installation and your initial drive, as they are not pre-set. It may take multiple adjustments to dial in your ideal ride. A good starting point is in the middle at 16 clicks from full soft, then drive the vehicle and make adjustments either softer or stiffer.

For more information, refer to the user guide.

Thank you for purchasing Air Lift Performance products!
